WHITEPAPER**

BRIHLO GOLD (BRIL)

TRON Blockchain Base Technology

Website: <https://brihlo.com>

Email: brihlo@brihlo.com

OVERVIEW

BRIHLO vision is to build a more intelligent cryptocurrency platform by introducing AI and machine learning technology, providing users with smarter, more efficient, convenient, and personalized cryptocurrency trading and investment services, and making the user experience even more perfect. We also aim to develop more diversified cryptocurrency application scenarios, such as trading mining, cross-chain payments, and more, making the application scope of cryptocurrency more extensive and rich. Our ultimate goal is to promote the globalization and popularization of blockchain technology and artificial intelligence, enabling more people to understand, participate in, and benefit from these technologies, and contribute to the progress and development of blockchain.

Promoting the Globalization and Popularization of Blockchain and AI Technologies Our vision for the **BRIHLO Gold Token** project is to promote the globalization and popularization of blockchain and AI technologies, enabling more people to understand, participate, and benefit from these technologies, and making a contribution to the progress and development of human society and Buy **BRIHLO** and encashment in Local Currency.

ABSTRACT

It has been seen that digital currency is weaving its magic all around the world, nowadays it is considered as a best currency. While observing this, BRIHLO GOLD - BRIL came up with the motive to introduce this currency to everyone. Founders of BRIHLO – BRIL and its team believe that we can do a lot in digital currency as we are doing today. It is a path to make this sector more attractive for the local business as well as to common people along with this, we focus to remove extract the technical technology. This sector has a potential to transform the way of business, done across the world. Modern and relevant technologies, makes it more user friendly. We have major goals for this sector and with the help of TRON we want to meet the digital currency to its need by accepting this coin to the local corner shops. The main aspiration behind this Token is to reach to the worldwide everyone starts using it and accept it.

OUR GOAL

Many aspects of society are not fully understood in the context of their capabilities and technological advancements; we want to transform it by supporting and demonstrating that there can be great people in the crypto world who integrate the best of the Blockchain Industry for the community.

Introduction

BRIHLO – BRIL is generated in Feb. 2024, and has been backed by a dedicated digital currency exchange March 2024. It is design for the entrepreneurs and allows individuals to make cost effective, secure and fast transaction via decentralized peer to-peer Tron network. BRIHLO - BRIL is use worldwide and it is the choice of the best entrepreneurs. This paper is set out with the motive to introduce the BRIHLO - BRIL, the underlying technology that supports it and it is based on the business support philosophy. It explores the principles of the digital currency from the core. It includes the features like security, privacy and flexibility. In this, we describe the benefits which are offered to both consumers and business owners, as well as the support network offered by BRIHLO - BRIL and the BRIHLO - BRIL Foundation. The BRIHLO - BRIL Foundation has been designed as an open source and participatory standards body for the BRIHLO - BRIL, project.

Efficiency of Cryptocurrencies

For the distribution of preference evaluates the efficiency of BRIHLO – BRIL as a means of payment relative to a cash system. All computations are for our benchmark model with the same preference parameters, but using different payments systems: cash, BRIHLO – BRIL, optimal reward structure for BRIHLO – BRIL. Besides mining costs, we report two measures of the welfare cost. The first measure gives the fraction of consumption people are willing to sacrifice in order to use cash under the Friedman rule which implies zero welfare costs. The second one computes the inflation rate with traditional cash so that people are indifferent between such system and the cryptocurrency. The current BRIHLO – BRIL design is very inefficient, generating a welfare loss of 1.4% relative to an efficient cash system.²⁷ the main source for this inefficiency is the large mining cost, which is estimated to be 360 MN USD per year. This translates into people being willing to accept a cash system with an inflation rate of 230% before being better off using BRIHLO – BRIL as a means of payment. ²⁷For comparison, a cash system with a 2% money growth rate generates a relatively small welfare cost of 0.003%. ³¹ However, given the distribution of preference shocks, it is inefficient to set the money growth rate and the transaction fees as high as in the calibrated model for BRIHLO – BRIL. The optimal policy is to reduce the money growth rate – and to not use transaction fees at all (see Proposition 8) – which will discourage mining substantially. Consequently, an optimally designed reward structure for BRIHLO – BRIL would reduce its welfare cost to a small fraction of its estimated current cost (0.08%). The corresponding inflation that leaves people indifferent would drop to a more moderate level of 27.51%. Still, relative to cash, BRIHLO – BRIL seems to be a very inefficient payment system for facilitating the observed set of transactions. This result could be driven by the fact that in the data, BRIHLO – BRIL is being used for both large and small value transactions, and that the total volume of transactions is small. In order to control for this, we examine next the efficiency of a cryptocurrency when it is used to support a large volume of either small or large value transactions.

Applications

AI + Crypto = **BRIHOL GOLD (BRIL)**

AI-Powered Trading With **BRIHLO** cutting-edge BRIL technology, we are able to provide users with intelligent, efficient, and personalized trading and investment services, making the crypto trading experience more seamless and intuitive than ever before.

Diverse Range of Crypto Applications **BRIHLO** project is committed to creating a more diverse and comprehensive range of crypto applications, including trading mining, cross-chain payments, and among others.

Roadmap

Now is just the beginning

Conduct market research and competitive analysis to understand the cryptocurrency market and user needs. Build the **BRIHLO GOLD Token** team and technical architecture, determine development plans and timelines. **Develop trading algorithms and strategies based on artificial intelligence and machine learning technologies. Begin developing the BRIHLO trading platform, including user interface and backend systems.** Promote the **BRIHLO (BRIL)** project to the community, increase brand awareness and community engagement. Improve the functionality and performance of the BRIHLO trading platform, strengthen system security and stability. **Launch the BRIHLO trading platform, start accepting user transactions and investments.** Continue to optimize **BRIHLO** trading algorithms and strategies to improve user trading efficiency and success rate.

Auction Details

BRIHLO GOLD (BRIL) will conduct a token sale through a token auction model. This model allows interested parties to purchase **BRIHLO GOLD** tokens at a discounted price before the tokens are publicly traded on exchanges. The token sale will have a predetermined hard cap and soft cap, with the sale ending once the hard cap is reached. The funds raised during the token sale will be used to further develop the **BRIHLO** platform and expand its user base. **BRIHLO** tokens will be available for purchase with TRON (TRX) & BINANCE chain (BSC) or other accepted cryptocurrencies, and the amount of **BRIHLO** tokens issued will be fixed. Once the token sale is complete, no additional tokens will be created. The **BRIHLO** team is excited to offer this opportunity to interested parties and looks forward to further developing and growing the **BRIHLO** platform with the support of its community.

BRIHLO – BRIL Auction

- Soft Cap: 1.2 M USDT, Hard Cap: 2 M USDT
- Price: 5 USDT = 1 BRIL
- **The unsold portion will be burned after the sale.**
- The sale will end within 24 hours after reaching the soft cap.
- Limitation: The auction limit for each wallet is 20,000 USDT.
- Time: TBA

Purposes

- Platform development and improvement
- Marketing and promotion to expand the user base
- Business development and partnerships
- Research and development for new features and products
- Legal and compliance expenses
- Operating expenses such as salaries, rent, and utilities

The specific allocation of funds may change based on the needs of the project and the progress of development, but the team will always strive to use the funds in the most efficient and effective way to achieve the goals of the project.

BRIHLO GOLD Economic Model

BRIHLO - BRIL

When you want to have a perfect experience of the features in the BRIHLO project, BRIL token is your best choice. As our platform's native token, BRIL will bring you better experience and more empowerment solutions. BRIL token is not just a token, it can also be used for paying fees, participating in platform governance, and getting platform discounts, etc. Additionally, we will introduce novel application scenarios such as transaction mining, cross-chain payment, and other support for BRIL tokens, making your tokens more valuable. Therefore, by using BRIL tokens to experience the BRIL project, you will enjoy better trading experience, more usage scenarios, and greater returns.

Empowerment

1. **Support:** Introduce support for BRIL token, enabling users to use BRIL token to purchase and trade, thus increasing the diversity and application scenarios of the token.
2. **Social Networking:** Integrate BRIL token with social networks such as Twitter, Discord, Telegram, etc., allowing users to engage in activities such as tipping, communication, and promotion on social media using BRIL token.
3. **Rewards and Incentives:** Reward and incentivize users with BRIL token, such as platform usage rewards, referral rewards, event rewards, etc.
4. **Security Measures:** Introduce security measures for BRIL token, such as multi-signature, smart contract auditing, fraud prevention, and security vulnerability prevention, to ensure the safety and reliability of the token.
5. **Learning and Education:** Launch learning and education projects for BRIL token, such as providing training courses for blockchain and artificial intelligence, hosting online seminars and academic research, to enhance users' knowledge and skill levels, and further promote the development and application of BRIL token.

Total Supply

9999999999.00

Distribution

- 60% allocated for **platform auction**.
- 15% allocated for **liquidity**
- 15% allocated for **booster trading mining**
- 5% allocated for **team** (unlocked after 3 months)
- 5% allocated for **treasury**

Introduction

The combination of Crypto and AI has led to an exciting new avenue in trading and investment services. With our advanced AI-powered trading technology, users can now enjoy a more intuitive and seamless experience than ever before. Our BRIL technology allows us to provide personalized and highly efficient trading services, delivering intelligent insights and analysis based on real-time data. Through the use of AI, we are able to streamline the trading process and make it more user-friendly, minimizing the need for human intervention and reducing the risk of error. Our intelligent algorithms can quickly scan vast amounts of data, identify patterns and market trends, and provide our users with up-to-the-minute trading recommendations. In summary, the integration of Crypto and AI provides users with a powerful tool to navigate the complexities of the digital currency world, delivering a seamless and intuitive trading experience that is tailor-made to their individual needs and preferences.

Our Goal

1. Utilize AI technology to provide personalized trading services, offering tailored investment advice and recommendations that maximize trading efficiency and personal satisfaction.
2. Use AI algorithms to predict and assess market trends and shifts while minimizing uncertainty, ultimately safeguarding the best interests of investors.
3. Build a highly efficient and reliable automated trading system, reducing human intervention and errors in decision-making and financial operations.
4. Establish a secure system that protects investors' personal information and funds.
5. Continuously learn and optimize trading strategies, increasing the system's intelligence and enhancing user experience.

Why We Develop It?

1.

Efficiency: Automated trading systems utilizing AI algorithms can analyse market data in real-time, quickly identifying potential trading opportunities, and generating higher returns for investors.

2.

Personalization: Based on individual investment preferences, risk tolerance, and other factors, clients can receive personalized investment advice and solutions that better meet their needs.

3.

Risk Reduction: Automated systems that minimize human error, increase decision-making accuracy, and allow investors to better control risk.

4.

Increased Intelligence: By incorporating AI and machine learning technology, the system can continually learn and optimize trading strategies, improving forecasting accuracy, and reducing error rates.

5.

Convenience: The fully automated trading process allows for easy access via smartphones or computers, enabling investors to trade anytime, anywhere.

6.

BRIHLO – BRIL GOLD TOEKN, a crypto backed by a Gold equivalent to 1 BRIL = 0.01gm of Gold value.
